

Claims:

1. A wall plug suitable for connecting an item of telecommunications equipment to a telecommunications network, wherein the equipment and the network are separated by a wall, the wall including a bore communicating through the wall, the device comprising a hollow body in the form of a tube engageable in the bore, the tube including
- (i) termination means to terminate a cable connected to the telecommunications network; and
- (ii) connection means to receive a connector of the item of telecommunications equipment
- the termination and connection means being so arranged that with a cable terminated on the termination means, connection of the connector to the connection means provides an interconnection between the equipment and the network.
2. A wall plug according to claim 1, wherein the connection means comprise an inter-engageable member suitable for coupling to a second inter-engageable member, the second inter-engageable member being connected to the item of telecommunications equipment.
3. A wall plug according to claim 2 wherein the first inter-engageable member is a line jack outlet.
4. A wall plug according to any preceding claim wherein the body is further adapted to guide the path of the cable along the bore.
5. A wall plug having a body to be received within a bore in a wall, the body having at one end a cavity housing an electrical or optical connector, a passageway coupled to the cavity to permit a communications cable to pass into the housing and to couple to the connector.
6. A wall plug as claimed in any preceding claim which tapers throughout its length and being widest at said one end.

7. A wall plug as claimed in any of claims 1 to 5 which does not taper throughout its length but whose end remote from said one end is conical, tapering away from said one end.
- 5 8. A wall plug as claimed in claim 1 or 7 wherein said one end of the plug is untapered.
9. A wall plug as claimed in any preceding claim wherein at least part of the exterior periphery of the body is provided with circumferential flanges.
- 10 10. A wall plug as claimed in any of claims 5 to 9 wherein the connector is retained in the cavity by means of a snap-fit coupling.
11. A wall plug as claimed in claim 10 wherein the snap-fit coupling is provided
15 between part of the connector and part of the body.
12. A wall plug as claimed in claim 11 wherein the snap-fit coupling is provided between part of the body and a further component, the connector being secured within the cavity by the further component.
- 20 13. A wall plug as claimed in any preceding claim, wherein the body is moulded from a polyamide plastics material.
14. A wall plug as claimed in claim 5, located within a bore in a wall, the cavity
25 being contained within the wall.
12. A wall plug substantially as described in accordance with the drawings.
